Simplifies the game – keeps the tradition

Gobex is the first to offer electronic smart cards as a replacement for the paper based score cards that are used today.

GolfScore makes score keeping easier for both club and player. In addition, the game itself becomes more enjoyable.

Most of the calculations take place automatically so the player can concentrate more on the game. In addition it makes final score calculations in tournaments simplistic. Tournaments can also have live score, which will make it entertaining for others to follow the results.

Smart

GolfScore will for a golf club consist of one registration kiosk placed somewhere near the club house, a number of terminals placed along the course and the players' own smart cards.

The kiosk is used before a round for putting a score card on the player's smart card. This score card is initialized with handicap strokes and other data about the game. Many different game types are supported.

The smart card uses well known standards and can easily be used in solutions for payment, access control and so on.

Easy

The players use the terminals on each tee for writing the number of strokes used on the previous hole to the smart card.

The number of strokes is everything the player needs to enter. The terminals show score and the number of handicap strokes for the next hole and will warn the golf player if the play goes too slow. All this makes the game go faster.

For your own statistical reference it is also possible to enter more data about the game, like the number of putts and fairway hits.

Entertaining

The round is finished when the player visits the kiosk for calculation of the final score and receives a printed score card. The score card will also be available for players that wish to view statistics of their own progression over the Internet.

By using GolfScore, tournament results are generated automatically providing the possibility to follow live results sent directly from terminals on the course.

We want to try GolfScore

GolfScore is very easy to install. The terminals on the course do not need any network or power cables. However, connection to the Internet should be made available for the kiosk.

The golf clubs will experience major time savings, both for ordinary and tournament play, which will again lead to better service for the golfers.

The golfers will have an easier way to record their score. In addition, GolfScore will create a more entertaining course experience and provides a unique possibility to follow the progression of their own play.

”GolfScore is a fantastic and very easy system to use”

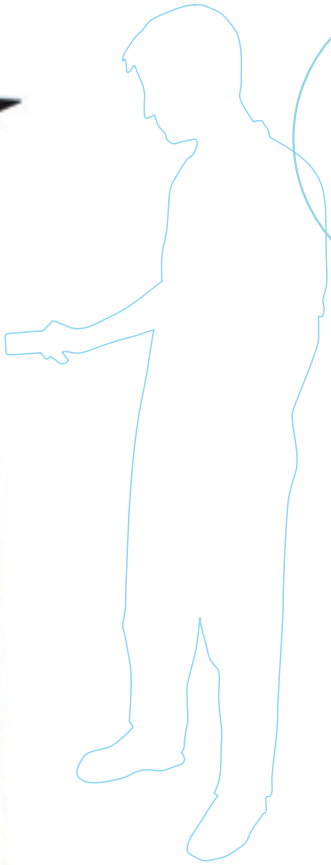

Olav Magne Trydal, managing director of Kvinesdal Golf Club

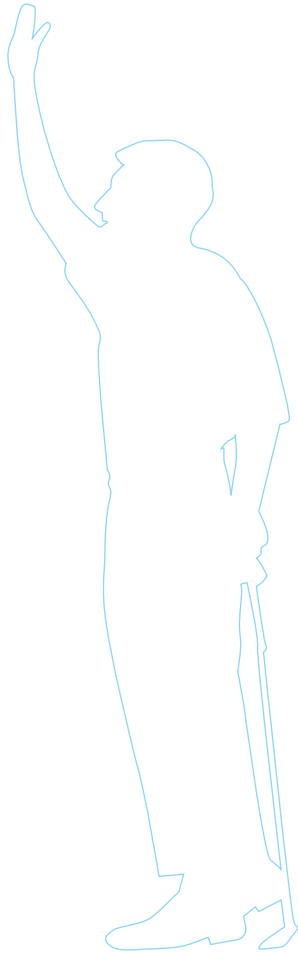

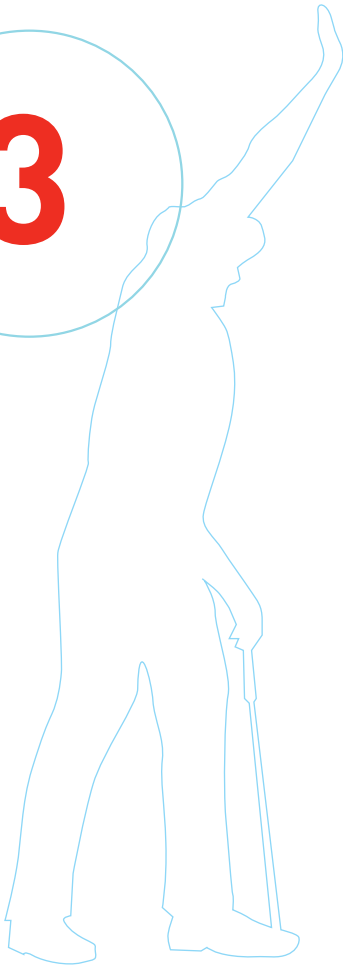

Easy to use
